crowns and bridges

zirconia frameworks

01 Model prepared from dentists impression. **02 Scanning** With Lava Scan, all dimensions of the model are precisely recorded. **03 Designing** Using the data from the framework, or coping, is designed on screen. **04 Milling** With Lava Form, the framework, or copings, are milled automatically with no handling. **05 Colouring** Using a unique patented system developed by 3M, the Zirconia is modified to the shade for prescribed restoration. **06 Sintering** The dried framework, or copings, are sintered in the Lava Therm. **07 Finalising** Frameworks, or copings, are veneered with Lava cream.

the results

Lava™ crowns and bridges are made with a zirconia Framework which is a high-tech ceramic milled to a precision fit with Cad Cam technology. Lava™ Zirconia Restorations are as strong as metal based crowns and bridges with many advantages:-

- More natural appearance
- Eliminates grey shadows on gums
- Totally biocompatible Feel like natural teeth
